Your Sculptra®Aesthetic

Doctor Discussion Guide.

A clear and open conversation with your physician is important. Being prepared can help. This guide can help you have a better conversation with your physician about whether Sculptra®Aesthetic may be right for you.

What do you want from a facial anti-aging treatment?

Here's a good place to start. Take a look at the boxes below and check off the statements that match what you're looking for.

- Gradual effects that work over time, not overnight
- Results that give you a natural-looking appearance without giving you away
- A treatment that helps to replace your own lost collagen
- Proven results that can last up to 2 years

INDICATION AND IMPORTANT SAFETY INFORMATION FOR SCULPTRA AESTHETIC

Sculptra® Aesthetic (injectable poly-L-lactic acid) is indicated for use in people with healthy immune systems as a single regimen for the correction of shallow to deep nasolabial fold contour deficiencies and other facial wrinkles in which deep dermal grid pattern (cross-hatch) injection technique is appropriate.

Sculptra Aesthetic should not be used by people that are allergic to any ingredient of the product or have a history of keloid formation or hypertrophic scarring. Safety has not been established in patients who are pregnant, lactating, breastfeeding, or under 18 years of age.

Sculptra Aesthetic has unique injection requirements and should only be used by a trained physician. Contour deficiencies should not be overcorrected because they are expected to gradually improve after treatment.

Sculptra Aesthetic should not be injected into the blood vessels as it may cause vascular occlusion, infarction or embolic phenomena. Use at the site of skin sores, cysts, pimples, rashes, hives or infection should be postponed until healing is complete. Sculptra Aesthetic should not be injected into the red area (vermillion) of the lip or in the peri-orbital area.

The most common side effects after initial treatment include injection site swelling, tenderness, redness, pain, bruising, bleeding, itching and lumps. Other side effects may include small lumps under the skin that are sometimes noticeable when pressing on the treated area. Larger lumps, some with delayed onset with or without inflammation or skin discoloration, have also been reported.

Sculptra Aesthetic is available only through a licensed practitioner. Complete Instructions for Use are available at www.SculptraAesthetic.com.
What should you ask your physician?

You may want to consider using these questions to start the conversation with your physician.

- Is there any other treatment that works like Sculptra® Aesthetic?
- Where in the face is Sculptra Aesthetic injected?
- Will it make me look like I’ve had work done?
- How does Sculptra Aesthetic work?
- What are the possible side effects of treatment with Sculptra Aesthetic?
- Is there any ingredient in Sculptra Aesthetic that I may be allergic to?
- How soon after treatment can I resume my normal activity?
- When can I expect to see results?
- I know that more than 1 treatment session may be required. How many do you think I would need?*
- How long might the treatment effects last?

*On average 3 treatment sessions are needed over a few months.

Please tell your dermatologist, plastic surgeon, or facial plastic surgeon about all the medicines you are taking, even over-the-counter products or treatments.
